ARUN ENTERPRISES Employee Portal

Hostinger VPS Setup Guide - Folder banane se Finish tak (Portal port 8002)

Stack: React (frontend) + FastAPI / Python (backend) + MongoDB. Is guide se aap portal ko apne Hostinger VPS par chala sakte hain. Jahan **[brackets]** hain, wahan apni value bhariye.

Port ka niyam: Aapka main ERP port **8001** par chal raha hai - use bilkul mat chhuiye. Ye Employee Portal ka backend port **8002** par chalega. Dono ka database, service aur Nginx file alag-alag hai, isliye ek ka kaam doosre ko disturb nahi karega. Portal mein CORS setting nahi hai: website aur /api ek hi domain se chalte hain, isliye zaroorat nahi.

Step 0 - Pehle se taiyaari (checklist)

• Hostinger VPS: Ubuntu 22.04 / 24.04, kam se kam 2 vCPU, 4 GB RAM, 50 GB disk (KVM 2 plan ya upar).

• Portal ka domain: **https://emp.arunenterprisespryg.in**. Dhyan dein: **erp.arunenterprisespryg.in** par aapka main ERP chal raha hai, use mat badaliye.

• Code: Emergent chat mein **'Save to GitHub'** se code apne GitHub repo mein bhejiye (ya code download kijiye).

• Purana data (employees, attendance, requests, payslips): live database ka export Emergent support se maangiye (mongodump / JSON). Bina export ke naya server khaali database se shuru hoga.

• Saari secret values (passwords, keys) ek surakshit jagah likh lijiye. Inki list Step 5 mein hai.

Step 1 - DNS: subdomain ko VPS se jodiye

Domain provider (Hostinger hPanel -> Domains -> DNS Zone) mein naya record banaiye:

Type	Name	Value	TTL
A	emp	[VPS IP address]	3600

Step 2 - VPS mein login aur zaroori software

Hostinger hPanel -> VPS -> SSH details se login kijiye (Windows par PowerShell / PuTTY):

```
ssh root@[VPS_IP]
apt update && apt upgrade -y
timedatectl set-timezone Asia/Kolkata
apt install -y git nginx python3 python3-venv python3-pip certbot python3-
    certbot-nginx ufw curl gnupg
# Node.js 20 + Yarn
curl -fsSL https://deb.nodesource.com/setup_20.x | bash -
apt install -y nodejs && npm install -g yarn
```

Pehle check kijiye ki port 8001 par ERP chal raha hai aur 8002 khaali hai. Pehli line mein ERP dikhna chahiye, doosri line kuch nahi dikhaye:

```
ss -ltnp | grep ':8001'
ss -ltnp | grep ':8002'
```

Step 3 - MongoDB 7 install

Agar ERP ke liye MongoDB is VPS par pehle se chal raha hai to ye step chhod dijiye. Portal apna alag database (**arun_portal**) banayega, ERP ka database nahi chhuega.

```
curl -fsSL https://www.mongodb.org/static/pgp/server-7.0.asc | gpg -o /
    usr/share/keyrings/mongodb-server-7.0.gpg --dearmor
echo "deb [ signed-by=/usr/share/keyrings/mongodb-server-7.0.gpg ] https:/
    /repo.mongodb.org/apt/ubuntu jammy/mongodb-org/7.0 multiverse" \
  > /etc/apt/sources.list.d/mongodb-org-7.0.list
apt update && apt install -y mongodb-org
systemctl enable --now mongod
mongosh --eval "db.runCommand({ ping: 1 })"
```

MongoDB sirf server ke andar (127.0.0.1) sunta rahe; bahar ke liye port 27017 mat kholiye.

Step 4 - Server par portal ki directory banaiye aur code laiye

Portal ke liye alag user aur alag folder **/opt/portal** banega (ERP ke folder se bilkul alag):

```
adduser --disabled-password --gecos "" portal
mkdir -p /opt/portal
chown portal:portal /opt/portal
sudo -u portal git clone https://github.com/[aapka-user]/[repo].git /opt/
    portal/app
ls /opt/portal/app          # backend  frontend  dikhna chahiye
```

Step 5 - Backend setup (FastAPI)

```
cd /opt/portal/app/backend
sudo -u portal python3 -m venv /opt/portal/venv
sudo -u portal /opt/portal/venv/bin/pip install -r requirements.txt \
  --extra-index-url https://d33sy5i8bnduwe.cloudfront.net/simple/
sudo -u portal nano /opt/portal/app/backend/.env
```

backend/.env mein ye keys bhariye (har value double quotes mein):

Key	Kya daalna hai
`MONGO_URL`	mongodb://127.0.0.1:27017
`DB_NAME`	[arun_portal]
`JWT_SECRET`	lamba random text (openssl rand -hex 32)
`ADMIN_EMAIL / ADMIN_PASSWORD`	SuperAdmin ka email aur password
`ADMIN_FORCE_RESET`	false
`APP_TIMEZONE`	Asia/Kolkata
`PUNCH_IN_WINDOW / PUNCH_OUT_WINDOW`	09:10-09:30 / 18:10-18:30
`VENDOR_API_URL`	https://erp.arunenterprisespryg.in/api
`VENDOR_EMAIL / VENDOR_PASSWORD`	ERP HR login
`VAPID_PUBLIC_KEY / VAPID_PRIVATE_KEY / VAPID_SUBJECT`	punch reminder keys (purani wahi rakhiye)
`WEBHOOK_CRON_SECRET`	lamba random text

COMPANY_NAME / ADDRESS / CONTACT / LOGO	payslip branding (purani values)

Integration proxy waali key (INTEGRATION_PROXY_URL) Emergent ki internal hai; VPS par uski zaroorat nahi.

Step 5A - ERP link se API kaise banayein (VENDOR_API_URL)

Aapke paas sirf ERP ka website link hota hai. API ka pata usi link ke aakhir mein **/api** jodne se banta hai:

Aapka ERP link	`https://erp.arunenterprisespryg.in/`
VENDOR_API_URL (API)	`https://erp.arunenterprisespryg.in/api`

• backend/.env mein likhiye: `VENDOR_API_URL="https://erp.arunenterprisespryg.in/api"` (aakhir ka / ho ya na ho, dono chalega).

• VENDOR_EMAIL / VENDOR_PASSWORD mein ERP ke HR login wale hi email aur password daaliye. ERP ka domain badalne par password wahi rehta hai.

• Kabhi ERP ka domain badle to sirf ye ek line badaliye, phir **systemctl restart portal-api** chalaiye.

Link sahi hai ya nahi, VPS par check kijiye. Login ka jawab 200 aaye aur usme "token" ho to link sahi hai:

```
curl -s -o /dev/null -w "%{http_code}\n" https://erp.arunenterprisespryg.
    in/api/auth/login \
  -H "Content-Type: application/json" -d '{"identifier":"[ERP email]",
    "password":"[ERP password]"}'
```

Portal chalu hone ke baad: SuperAdmin se login -> Employees -> **Sync now**. Upar "success" aur employees ki ginti dikhni chahiye. "Cannot connect to ERP" aaye to VENDOR_API_URL dobara check kijiye.

Step 5B - SuperAdmin login aur users

• Login ID mein **SuperAdmin** (ya Superadmin / SUPRADMIN) ya ADMIN_EMAIL, aur password ADMIN_PASSWORD wala.

• Naye Admin / HR / Manager users sirf SuperAdmin banata hai: menu **Users** -> Create user (Name, Email, Mobile, Password, Confirm password, Role, har module par View / Edit / Approve).

Step 5C - Backend ko hamesha chalu rakhiye (systemd service)

```
cat > /etc/systemd/system/portal-api.service <<'EOF'
[Unit]
Description=Arun Portal API
After=network.target mongod.service
[Service]
User=portal
WorkingDirectory=/opt/portal/app/backend
ExecStart=/opt/portal/venv/bin/uvicorn server:app --host 127.0.0.1 --port
    8002 --workers 2
```

```
Restart=always
[Install]
WantedBy=multi-user.target
EOF
systemctl daemon-reload && systemctl enable --now portal-api
systemctl status portal-api --no-pager
curl -s http://127.0.0.1:8002/api/push/public-key
```

Aakhri line ek lamba key text dikhaye to backend port 8002 par chal gaya. ERP abhi bhi 8001 par chal raha hai, check: **ss -ltnp | grep ':800'**

Step 6 - Purana data import (agar export mila ho)

```
# export folder (dump/) VPS par copy kijiye:  scp -r dump root@[VPS_IP]:/
    root/
mongorestore --uri "mongodb://127.0.0.1:27017" --nsFrom "[purana_db].*" --
    nsTo "[arun_portal].*" /root/dump
systemctl restart portal-api
```

Login data (passwords) alag collection **auth_credentials** mein rehta hai; ERP sync ise kabhi nahi chhoota. Restore karte waqt ye collection bhi zaroor aana chahiye, warna sabko password reset karna padega.

Step 7 - Frontend build (React)

```
cd /opt/portal/app/frontend
echo 'REACT_APP_BACKEND_URL="https://emp.arunenterprisespryg.in"' | sudo -
    u portal tee .env
sudo -u portal yarn install --frozen-lockfile
sudo -u portal yarn build          # build/ folder banega
```

Step 8 - Nginx (website + /api)

```
cat > /etc/nginx/sites-available/portal <<'EOF'
server {
    listen 80;
    server_name emp.arunenterprisespryg.in;
    root /opt/portal/app/frontend/build;
    index index.html;
    client_max_body_size 20M;
    location /api/ {
        proxy_pass http://127.0.0.1:8002;
        proxy_set_header Host $host;
        proxy_set_header X-Real-IP $remote_addr;
        proxy_set_header X-Forwarded-For $remote_addr;
        proxy_read_timeout 120s;
    }
    location = /sw.js { add_header Cache-Control "no-cache"; }
    location / { try_files $uri /index.html; }
}
EOF
ln -sf /etc/nginx/sites-available/portal /etc/nginx/sites-enabled/portal
nginx -t && systemctl reload nginx
```

Ye file sirf **emp.arunenterprisespryg.in** ke liye hai. ERP ki Nginx file (erp.arunenterprisespryg.in -> 8001) jaisi hai waisi rahegi. 'nginx -t' mein 'successful' aana chahiye.

Step 9 - HTTPS (free SSL)

```
certbot --nginx -d emp.arunenterprisespryg.in --redirect -m
    arunenterprises2023@gmail.com --agree-tos
```

Camera (selfie), GPS aur notifications sirf HTTPS par chalte hain, isliye ye step zaroori hai.

Step 10 - Automatic kaam (cron): sync aur punch reminders

Emergent par ye kaam platform karta tha. VPS par crontab mein daaliye (**crontab -e**):

```
CRON_TZ=Asia/Kolkata
S=[WEBHOOK_CRON_SECRET]
0 * * * *    curl -s -X POST -H "Authorization: Bearer $S" http://127.0.0.
    1:8002/api/cron/vendor-sync
10 9 * * 1-6  curl -s -X POST -H "Authorization: Bearer $S" http://127.0.
    0.1:8002/api/cron/punch-reminder-in
10 18 * * 1-6 curl -s -X POST -H "Authorization: Bearer $S" http://127.0.
    0.1:8002/api/cron/punch-reminder-out
30 2 * * *    mongodump --uri mongodb://127.0.0.1:27017 --db [
    arun_portal] --out /root/backup/$(date +\%F)
```

Step 11 - Firewall

```
ufw allow OpenSSH && ufw allow 'Nginx Full' && ufw enable
```

Step 12 - Check karke chalu kijiye

• https://emp.arunenterprisespryg.in kholiye -> SuperAdmin se login kijiye.

• https://erp.arunenterprisespryg.in bhi kholiye -> ERP pehle jaisa chalna chahiye (port 8001).

• Employees page par **Sync now** dabaiye -> ERP ke employees aane chahiye.

• Ek employee se mobile par Punch In (camera + location allow) karke dekhiye; ERP attendance mein update dikhna chahiye.

• Payslip PDF download, Leave request aur approve check kijiye.

• Employees ko naya link bhejiye. Mobile app (PWA) naye link se dobara install karna hoga, aur 'Turn on reminders' phir se dabana hoga.

• Credential slip ka QR code apne aap naye domain ka banega.

Step 13 - Aage update kaise karein

```
cd /opt/portal/app && sudo -u portal git pull
sudo -u portal /opt/portal/venv/bin/pip install -r backend/requirements.
    txt --extra-index-url https://d33sy5i8bnduwe.cloudfront.net/simple/
systemctl restart portal-api
cd frontend && sudo -u portal yarn install && sudo -u portal yarn build
```

Dikkat aaye to

• Backend log: **journalctl -u portal-api -n 100**

• 'address already in use' error: port 8002 par koi aur chal raha hai. **ss -ltnp | grep 8002** se dekhiye. 8001 kabhi mat lijiye, wo ERP ka hai.

• 502 Bad Gateway: portal-api band hai. **systemctl restart portal-api** chalaiye.

• Nginx log: **tail -n 50 /var/log/nginx/error.log**

• Login nahi ho raha: backend/.env mein ADMIN_EMAIL / ADMIN_PASSWORD aur JWT_SECRET check kijiye, phir **systemctl restart portal-api**.

• Page khaali / 404 on refresh: Nginx mein 'try_files $uri /index.html' line check kijiye.

• Sync fail: VENDOR_API_URL aur ERP login sahi hai ya nahi dekhiye.
